
Subject: scrolling without Frame and wrapping Ctrl?

I want something like this:

```
-----  
|  |  |  
|---|  
|  |  |  
|---|  
|  |  |  
-----
```

and the inner rectangle should be scrollable, so i need to set the rectangle of it using SetRect(), this means i need either a Frame around it or a wrapping Ctrl, or is there another possibility to do this? eg a SetCtrlPositionSize() or anything similar.

thanks,
Bas
