Hello,

i want to upload an file to Rapidshare with HttpRequest.

Is there an example how to create a POST Request? And an example how to upload a file?

I found this code, but i dont whether it works or not and how to add other post parameters (like username, password)

```
String boundary = "BbX8c0";
StringBuffer b;
b.Cat("--" + boundary + "\r\n");
b.Cat("Content-Disposition: form-data; name=\"file\"; filename=\"" + file + "\"\r\n\r\n");
b.Cat(fi);
b.Cat("\r\n--" + boundary + "--\r\n");
```

//EDIT: Okay, now i know what was wrong. Right code is

```
HttpRequest GetServer("http://api.rapidshare.com/cgi-bin/rsapi.cgi?sub=nextuploadserver");
ulserver = GetServer.Execute();
if(!GetServer.IsSuccess()){
    PromptOK("Couldn't find uploadserver");
    return;
}
```

```
HttpRequest req("http://rs" + ulserver + ".rapidshare.com/cgi-bin/rsapi.cgi");
req.POST();
req.Post("sub", "upload");
req.Post("login", "NAME");
req.Post("password", "PASSWORD");
req.Post("filename", file);
req.Post("filecontent", LoadFile(file));
String s = req.Execute();
```
