Hello Mirek,

i'll try it this way. But how does an Fileuplaod normaly work?

How does a browser handle a fileupload? I guess there is an other way.

For example this form

```
<form action="upload_file.php" method="post"
enctype="multipart/form-data">
<label for="file">Filename:</label>
<input type="file" name="file" id="file"><br>
<input type="submit" name="submit" value="Submit">
</form>
```

The "enctype="multipart/form-data"" causes a Multipart request.

<http://www.ietf.org/rfc/rfc2388.txt>

Is there a way to perfom those request with u++?
