Hello,

I diagnosed serious memory leak in MySql package. According to the following reference <http://dev.mysql.com/doc/refman/5.1/en/mysql-library-end.htm> I we need to call extra function (mysql_library_end(void)) to make total order.

I enclose patch code (MySql/MySql.cpp - line 132):

```
void MySqlSession::Close()
{
    SessionClose();
    if(mysql) {
        mysql_close(mysql);
        mysql_library_end();
        mysql = NULL;
        level = 0;
    }
}
```

Sincerely,
Klugier
