The critical line is

HTTP retry on error socket(6) / recv: Connection reset by peer

- means server disconnected you after receiving the request. Most likely there is something wrong with it.

Wild guess: Most servers (U++'s Skylark included) require some tokens in POST request to prevent

http://en.wikipedia.org/wiki/Cross-site_request_forgery

Means you have to imitate the browser requests a bit more than just sending plain POST.
