fallingdutch wrote on Tue, 11 July 2006 09:02I want something like this:

```
----------
|        |
|---     |
| |      |
|---     |
|        |
----------
```

and the inner rectangle should be scrollable, so i need to set the rectangle of it using SetRect(), this means i need either a Frame around it or a wrapping Ctrl, or is there another possibility to do this? eg a SetCtrlPositionSize() or anything similar.

thanks,
Bas

Sorry, but this is way too vague description... Any real live examples or something more specific?

BTW, there is nothing bad about wrapping Ctrl in most cases... U++ Ctrls are very light...
