mirek wrote on Mon, 15 April 2013 12:42l am not FtpClient author and brief review of code indicates that in that particular case, using !! is redundant.

Anyway, sometimes it can have same benefit, see Prompt:

```
int Prompt(Callback1<const String&> WhenLink,
           const char *title, const Image& iconbmp, const char *qtf, bool okcancel,
           const char *button1, const char *button2, const char *button3,
           int cx,
           Image im1, Image im2, Image im3)
{
.....
int nbtn = !!button1 + !!button2 + !!button3;
```

I can be wrong, but it is not guarantied that true == 1. You can only be sure that false == 0.
