Hello Martin,

Check your definitions of enum or struct etc.

```
struct mydata {  
...;  
...;  
...;  
};
```

If you miss ';' 'semicolon' any where then you will see this kind of error messages.

Check your console output for "Did you forget a ';'?" This will show the location of error.

This type of error message generally results from missing ';' in the code

If this error in in '.h' file then it is not getting marked with red marker as other normal errors.
