Hello Didier

It is possible to call a .iml Image by program "manually" but AFAIK this is only possible for the IMAGECLASS and IMAGEFILE defined in source.

This way StaticImage code cannot open an IMAGEFILE defined in your source.

However, I think it is possible to overcome this but I do not know how. The function to define could work like this:

Image img = LoadFromIml("Controls4U:Controls4U.iml:ImageSample_90");

.. But this would require to have the iml files accessible to exe instead of being embedded inside the exe.
