I see. I was not aware of such clever design. This is in fact a feature. Thank you for explanation.

I proceeded as newbie while creating new icons. After I created an icon, I searched a menu for code generation and put it into sources. Of course linker raised an error. I looked into gui tutorial where iml.h was used instead of iml_header.h without understanding why, but now I understand . I was too lazy to search the documentation or forum this time.

Jakub
