I've been using Ultimate++ for a while now, but I'm interested in testing NTL in other projects as well, and using full UPP stuff is much more than I need right now.

Is the [ntllib.org](http://ntllib.org) site maintained? and is the NTL download maintained? or will I be better off picking it out of a recent UPP distribution?

Thanx

no, no, yes...

Actually, to have somebody to maintain separate NTL would be nice..

Mirek

Out of sheer curiosity, only:

What does "maintain" mean to you?

Just keep the NTL as such in sync with Ultimate++' "integrated" NTL?

And/Or add comments to it?

And/Or improve it?

And/or push it to compete with Boost or alike?

I guess, keep in sync and/or rest

Mirek
