Well, atm this is my situation:

- using the USE_SQLITE flag I can correctly compile the ProtectEncrypt and the ProtectTest.
- using the .MYSQLDLL flag and the BioBytes's lib folder i can compile it only in optimal mode. In debug mode I receive the following error: "application can't find LIBMYSQL.dll..." and crash!

I checked in \lib\debug folder and libmysql.dll is there...
BioBytes, you can compile in debug mode too ?

Regards,
Matteo
