I started tinkering with fonts but decided not to go that route.

piotr5 wrote on Thu, 09 May 2013 02:34 as far as I know in wine 96 is the default dpi no matter where...

I have 5 computers near or on a desk. Each has a Win and Ubuntu OS. When the Upp app is run with wine the size is OK. For a user or even myself to change the font for each where necessary is not a viable option. Letting them know Wine needs to be installed is a better option.

Ctrl::NoLayoutZoom(); works good for the GUI size. BUT: Even though each field in the dlg.lay is specified for location and size in pixels that is ignored or over ridden by the font size or whatever.

Is there a way to lock in all the dlg.lay dimensions?

edit: Apparently in Win OS the dimensions are locked in and independent of the font size. I changed one of the EditField size from 12 to SetFont(StdFontZ(60). It still displays the characters as size 12.

I am not that familiar with the Upp GUI code so I may be wrong.
