Hi Klugier

The NOGTK flag worked fairly well. If it is not as efficient the option for a better way would be good.

I have not tried Sender Ghost's manual suggestion but will.
`window.Add(text.LeftPos(4, 100).TopPos(4, 20)); // Without Z suffix`

"X11 mode is more stable than GTK backend."

I don't understand this. If it takes longer to write the code isn't a problem but if effects it's running then it is a problem.

I am using MSC 12 for the updated C++ if that concerns the X11.

I will try `ChClassicSkin ()`;
