order to press the key

sound-edit program.

especially a java-port of u++ libs would be nice...

Maybe instead of 'abstractly' it is hypothetically.

I have an U++ app that has menus, buttons, etc.
It works fine in tablet mode with a mouse click or touch screen.

Maybe a sound-edit program would be better on a desktop.

C++ to java is not the way to go unless necessary.
Do a little research on jogl (java interface to OpenGL).
