---

I don't know if it's a problem with Skylark or with my router configuration.

Hopefully you can help me.

1) I have an ADSL modem as bridge and a WIFI router doing the PPPoE. On the WIFI router I used port forwarding for my PC to open all ports.

Do I need to open it on the bridged ADSL modem too?

2) With Skylark I just create a default Skylark project (no database) and executed it on port 8001.

Do I have to change something to make it listen for all machines instead of just localhost?

I'm using Windows 7.

Thanks
