Subject: Re: How to make a Skylark app accessible from outside?
Posted by lectus on Thu, 20 Jun 2013 20:40:33 GMT

Hi!
I solved the problem!

I had to set on Windows to use static IP instead of DHCP.

On the router I had DCHP, I also disabled it.

Lastly I double checked the ports were correctly forwarded in the router to the local IP of the PC.

It now works. It was not a problem with Skylark. Apache also runs now.

So, if anyone else is having this problem remember to open the ports in the router and use static IP on BOTH Windows and the router.
