Subject: [Win32 - FileSel - System Places Improvement] - Disk name

Hello,

I have noticed that FileSel shows only letter in system places if the disk (partition) dosen't have a name. We should change this behavior and call that disk simply: "Local Disk". This is the default notation on Windows. All we need to do is just to modify FileSel source code (CtrlLib/FileSel.cpp - Line 1713):

```
if(desc.GetCount() == 0)
    desc << " " << t_("Local Disk");
desc << " (" << n << ")";
```

Instead of:

```
if(desc.GetCount())
    desc << " (" << n << ")";
else
    desc = n;
```

Of course, We will need to make translation of "Local Disk" phrase. I have posted my national translation:

```
plPL("Dysk lokalny")
```

Sincerely,
Klugier
