According to , ONLY source packages are allowed to be added to PPA.

However, I can see U++ on PPA has

Number of packages:
11 source packages (273.8 MiB)
110 binary packages (2.3 GiB)

Are these really binary packages uploaded?

I do not think I can ask lanuchpad servers to build my U++ code. So how can I upload my source package or U++-generated binaries to launchpad please?
