bonami wrote on Tue, 02 July 2013 05:20 According to
<http://askubuntu.com/questions/189529/can-i-upload-binary-packages-to-a-launchpad-ppa>,
ONLY source packages are allowed to be added to PPA.
However, I can see U++ on PPA has Number of packages:

- 11 source packages (273.8 MiB)

- 110 binary packages (2.3 GiB)

Are these really binary packages uploaded?

I do not think I can ask launchpad servers to build my U++ code. So how can I upload my source package or U++-generated binaries to launchpad please?

The way PPA works is that you upload only source packages (.dsc) and launchpad builds the binary packages for you. So the packages you see were not uploaded but built in place
