Hi

I am trying to communicate among applications using windows messages. I do the
x=RegisterWindowMessage("XYZ") in both applications.

On one application I do

```
SendMessage(HWND_BROADCAST, x,(WPARAM)GetHWND(), 0);
```

and then I want to wait for the response. How to wait for an external windows Message?
I tried this but never takes place:

```
LRESULT CALLBACK SKTESTE::WndProc(HWND hWnd, UINT message, WPARAM wParam,  
LPARAM lParam)  
{  
    PromptOK("Hit!");  
    if(message==x)  
    {  
        PromptOK("x message arriving");  
        return 1;  
    }  
  
    DefWindowProc(hWnd, message, wParam, lParam);  
}
```

Thanks a lot

Alex
