
Subject: How to catch a (registered) Message coming from other application

Hi

I am trying to communicate among applications using windows messages. I do the
x=RegisterWindowMessage("XYZ") in both applications.

On one application I do

```
SendMessage(HWND_BROADCAST, x,(LPARAM)GetHWND(), 0);
```

and then I want to wait for the response. How to wait for an external windows Message?

I tried this but never takes place:

```
LRESULT CALLBACK SKTESTE::WndProc(HWND hWnd, UINT message, WPARAM wParam,
LPARAM lParam)
```

```
{
    PromptOK("Hit!");
    if(message==x)
    {
        PromptOK("x message arriving");
        return 1;
    }
}
```

```
DefWindowProc(hWnd, message, wParam, lParam);
}
```

Thanks a lot

Alex
