Hello,

I have noticed that if you push cancel or system window close button in the InsertColorDlg window, TheIDE performs paste operation on the code editor. This behavior is not acceptable.

How to reproduce?

1. Press Ctrl+A on the text editor.
2. Press RightButton.
3. Then Insert -> Insert color...
4. Push cancel or system window close button.
5. Result: The code disappeared!!!

I have enclosed improved source file (IDE package - Insert.cpp). I have added "canceled" variable and "IsCanceled" method to the InsertColorDlg window.

Sincerely,
Klugier
