Well, all logic related to this stuff is in the FontSelectManager class (Setup.cpp). Unfortunately, I do not know how to fix this class. Simple change in

```
Font FontSelectManager::Get() {
    Font f(FontZ(face->GetData(), height->GetData())); <-- Added FontZ here.
    if(*bold) f.Bold();
    if(*italic) f.Italic();
    if(*naa) f.NonAntiAliased();
    return f;
}
```

fixes font size, but it doesn't work with serialization.

Your suggestions are welcome!

TIA
