Hello,

It seems that, there are two docking packages one from bazzar and one from uppsrc. Personally, I think that we should remove three following packages from bazzar: "Docking",

"DockingExample1" and "DockingExample2". Two independent packages for docking contributes to unnecessary chaos. At the end, I would like to notice that "Docking" from uppscr compiles, but "Dokcing" from bazzar dosen't.

Guys, Can you try compile packages from "reference" assembly (DockingExample1 & DockingExample2)?

Sincerely, Klugier
