This time I try to change the following lines in Sqls.h

FROM:
private:
void operator=(const SqlSource&);
SqlSource(const SqlSource&);

TO:
public:
void operator=(const SqlSource&);
SqlSource(const SqlSource&);

It complies without error but generate link error:
undefined reference to 'Upp::SqlSource::SqlSource(Upp::SqlSource const&);'

Seems like the problems comes from the Sqls.h which is different from version 4193.
