How can I set the background color of a line in tables with QTFStr class ?

I have found:

```
QTFStr &ForeColor(String col = "") { format.foreColor = (col == "" ? "0" : col); return *this; }
QTFStr &BackColor(String col = "") { format.backColor = (col == "" ? "2" : col); return *this; }
```

but allow me to color the text or the text background, not the table background.

Regards,  
Matteo
