pfsdanny wrote on Fri, 19 July 2013 15:57Should you please explain these 2 lines. I don't understand what it means. I am new to C, thanks.

```
DBData() : port(3306) { }
DBData(const String& username, const String& password,
 const String& database, const String& host,
 const String& collate, const String& lockId, int port = 3306) :
 username(username),  password(password), database(database),
 host(host), collate(collate), lockId(lockId), port(port) { }
```

This feature is called C++ constructor initialization lists, where possible to do implicit assignments (when variables are created), instead of explicit assignments (afterwards):

```
 DBData() { port = 3306; }
 DBData(const String& username, const String& password, const String& database, const String& host,
  const String& collate, const String& lockId, int port = 3306)
 {
  this->username = username; this->password = password; this->database = database;
  this->host = host; this->collate = collate; this->lockId = lockId; this->port = port;
 }
```
