Hello,

I have noticed that GridCtrl uses wrong sorting icon order. Why we need to change this behavior? Beacuse, it seems most of GUI frameworks such as Qt or GTK use revert notation. Moreover this notation is more intuitive for casual user.

What we need to do is just replace images order (GridCtrl/GridDisplay.cpp - line 214):

```
        if(sortmode == 1)
  w.DrawImage(xf, yf, GridImg::SortDsc(), col);
 else
  w.DrawImage(xf, yf, GridImg::SortAsc(), col);
```

Insted of

```
 if(sortmode == 1)
  w.DrawImage(xf, yf, GridImg::SortAsc(), col);
 else
  w.DrawImage(xf, yf, GridImg::SortDsc(), col);
```

The other better solution is just replace icons names in GridCtrl.iml file. (SortDsc -> SortAsc, SortAsc -> SortDsc).

Sincerely,
Klugier
