hello Ultimate forum;)

i'm creating tables with RTF format. i reading some tutorials but they confuse me:(

heres the code that i use:

- starting a Table(ok is for start the paragraph;)):
"\par "

- creting a row:
"\trowd \trqc\trgaph108\trqc\trrh1000\trleft36"

- creating a cell:
"\clbrdrt\brdrdb\brdrsh\brdrs\clbrdrr\brdrdb\cellx500"

- end the cells and row:
"\pard\intbl \row "

- end the paragraph\table:
"\pard"

i read that "\trrh1000" is for change the row height, but, in textbox, is deleted and ignored:(
so how can i put several lines inside of a cell?
(was the best using the enter key too for create a new line;))
