It works on my machine now!

But the version I send to my colleague only had obfuscate in it, and it didn't work on his (Win7) computer. Are there any rules to obfuscate, like can I do....

```
void function()
{
    .....code
    .....
    OBFUSCATE_START_FUNC;
    .....
    .. secret stuff
    .....
    OBFUSCATE_END_FUNC;
    .....
    more code.....
}
```
