Alboni wrote on Thu, 01 August 2013 14:06 Does it execute code in the data segment?
Turning on data execution protection on my XP didn't make it stop working.

Nope, it decripts the code inside code segment, so is the opposite : it reads and write inside code segment.

This is allowed by this call :

```
bool res = VirtualProtect(start, size, access ? PAGE_EXECUTE_READWRITE :  
PAGE_EXECUTE_READ, &oldProt);
```

I don't know if it is possible to block it on windows7.
Never had such problems before.....
