Hi zsolc,

If you talk about DocEdit, then the responsible code is in DocEdit::Format(const WString& text) const, in CtrlLib/DocEdit.cpp.

I think that you'd just need to add check for '-' in this part: `if(*s == ' ' || *s == '\t') {`

```
    space = s;
```

```
    spacex = x + cw;
```

```
    *s = ' ';
```

```
}
```

I did not try it, but it should be quite straightforward

Best regards,

Honza
