Hi zsolt,

If you talk about DocEdit, then the responsible code is in DocEdit::Format(const WString& text) const, in CtrlLib/DocEdit.cpp.

I think that you'd just need to add check for '-' in this part: if(*s == ' ' || *s == '\t') {
   space = s;
   spacex = x + cw;
   *s = ' ';
  }
I did not try it, but it should be quite straightforward

Best regards,
Honza
