BTW, talking about style, I'm afraid I can't modify text colors for either current view month days or weekend days, apparently because you hard-coded them to Black and Red, respectively, in DateTimeCtrl.cpp around line #526:

```
...
if(m == view.month)
{
    Day(j, i) = d;

    fg = Black; // Shouldn't it be st.fgmain, instead??

    if(j == 6)
    {
        fg = Red; // Looks like there's no style color for this
    }
}
```

I didn't check your code in depth, so pls let me know if there's any workaround I missed here...
Tks!
