---

I followed the instructions at <http://upp.invothink.com/nightly/README>

U++ installs fine, but when I do

```
apt-get update
```

I get this warning

```
W: Duplicate sources.list entry http://upp.invothink.com/nightly/ wheezy/main amd64 Packages  
(/var/lib/apt/lists/upp.invothink.com_nightly_dists_wheezy_main_binary-amd64_Packages)
```

As I said it installs fine but I'm just reporting this to the repo maintainer.
