
Subject: Help setting up U++ on Debian 7

I followed the instructions at <http://upp.invothink.com/nightly/README>

U++ installs fine, but when I do

`apt-get update`

I get this warning

W: Duplicate sources.list entry <http://upp.invothink.com/nightly/> wheezy/main amd64 Packages
(/var/lib/apt/lists/upp.invothink.com_nightly_dists_wheezy_main_binary-amd64_Packages)

As I said it installs fine but I'm just reporting this to the repo maintainer.
