Hi Lectus,

I don't see anything wrong with the instructions on the first sight...

Could you check what is in your /etc/apt/sources.list.d/upp-nightly.list ? There should be only one line, containing something like /etc/apt/sources.list.d/upp-nightly.listdeb http://upp.invothink.com/nightly wheezy main

Also, you can check if some of the other sources files (/etc/apt/source.list, /etc/apt/sources.list.d/*) doesn't point to the same address.

Best regards,
Honza
