While looking at OBS yesterday, I noticed there are some new distro versions available, so I enabled build for those that we currently support: Debian 7.0, newer Ubuntus.

So the full list of existing packages is now:
Arch Linux
Debian 6.0 (squeeze)
Debian 7.0 (wheezy)
Ubuntu 11.10 (Oneiric Ocelot)
Ubuntu 12.04 (Precise Pangolin)
Ubuntu 12.10 (Quantal Quetzal)
Ubuntu 13.04 (Raring Ringtail)

Everything should be available both for x86 and adm64 architectures, in nightly and stable versions. If you decide to try any of the new ones, bug reports are welcome

Best regards,
Honza
