Sorry my English,

i'm created simple example to put some external opened Window in frame of TopWindow with DHCtrl and have a trouble:

```
GUI_APP_MAIN
```

```
{
```

```
    'this is for emulate of "some external opened Window"
```

```
TopWindow child;
```

```
    Label b;
```

```
    child.Add(b.SetLabel("Hello!").LeftPosZ(10, 100).TopPosZ(10, 10));
```

```
TopWindow main;
```

```
SplitterFrame sf;
```

```
#if 0
```

```
    //in top left of main we get "Hello!"
```

```
    main.AddFrame(sf.Left(child, 100));
```

```
#else
```

```
    //trying to achieve the same as above result with DHCtrl
```

```
DHCtrl wrap;
```

```
    child.Open();
```

```
wrap.NcCreate(child.GetHWND());
```

```
//probably do not need to do. I'm missing something, when...
```

```
    child.Hide();
```

```
main.AddFrame(sf.Left(wrap, 100));
```

```
    //...the result is white left frame without "Hello!"
```

```
#endif
```

```
main.Run();
```

```
}
```
