Hello,

It seems that POSIX printing dosen't work. The main problem with POSIX printing is that we are creating wrong "lp" command on some configuration. The correct command should look like this:

lp -d network-printer -o media=A5,Default -o number-up=1 -n 1

Insted of:

lp -d network-printer -o media=,Default -o number-up=1 -n 1

what is definitly incorrect.

I enclosed patched source file (CtrlLib/PrinterJob.cpp). What I have changed?
- The printing code is more secure (More logical conditions).
- "A4" is now the default page format in PrinterDlg.
- Minor fixes.

P.S.
"lp" - console utility which is used to print the files.

Sincerely,
Klugier
