pacoquintana wrote on Wed, 28 August 2013 20:15Hello, I am working with the latest version of upp\_portable in my pendrive (4424).

What can I do to upgrade to the latest version (5485) ?

Thanks in advance.

Paco

Hi Paco,

You can just download the fresh U++ and swap the sources on the pendrive, and also put a newer version of theide on it, just replacing the old one. There wasn't much changes since.

I admit I don't even remember well how it worked, I haven't used it much in last year or so... If you need to upgrade the compiler as well for some newer GCC, it should be quite easy too. The only tricky part was the launcher, but there was no progress since the last version, so it should be OK to use the same old version.

Best regards,

Honza
