Little test: See <http://www.unixtimestamp.com/index.php> for times

```
#include <Core/Core.h>
#include <time.h>
```

```
using namespace Upp;
```

```
CONSOLE_APP_MAIN
```

```
{
    time_t scalar = time(0); // seconds since 1/1/1970 00:00:00
    Time back;
    back.Set(scalar);

    Cout() << "The time is: " << asctime(localtime(&scalar)) << "\n"; // oldskool functions
    Cout() << "Scalar = " << scalar << "\n";
    Cout() << "Converted back = " << back << "\n";
}
```
