Quote: The error you describe seems as if you try to call the methods of `Bus()` before `Bus().Load("something.dll")` or `Bus().SetLibName("something.dll")` was called. If I'm looking correctly, you only call `Bus().Load()` inside the loop if `openBus == true`, while this code is in the else branch.

Uhhmm... I understand what do you mean. It's possible. But using `dli`, the declared dll functions are loaded by default when the application start. In the program I use `Load()` function only for change the used library.
