mubeta wrote on Sat, 21 September 2013 19:35Quote:The error you describe seems as if you try to call the methods of Bus() before Bus().Load("something.dll") or Bus().SetLibName("something.dll") was called. If I'm looking correctly, you only call Bus().Load() inside the loop if openBus == true, while this code is in the else branch.

Uhm... I understand what do you mean. It's possible. But using dli, the declared dll functions are loaded by default when the application start. In the program I use Load() function only for change the used library.

Yes, it can be loaded automatically, but if I'm not mistaken it can only be done if you give a full path when you define DLIFILENAME or when the dll can be found on system path.
