iST1 wrote on Mon, 23 September 2013 15:29 I do not have Office > 2003, but can you give me some advice about frame removing? Something like this

```
int counter = ActiveWindow.Application.CommandBars.Count;
for(int i = 0; i < counter;i++)
ActiveWindow.Application.CommandBars[i].Enabled=false;
}
```

Also can be Close method added to Automation?

Hello iST1

I do not know what do you mean with "frame removing".

What would have to do Close()?

This code is better but flickering remains:

```
#include <OfficeAutomation/OfficeAutomation.h>

using namespace Upp;

class WordFrm : public TopWindow {
public:
WordFrm() {
Sizeable().Zoomable();
embedded = 0;
}
void Embed() {
if (doc.IsAvailable("Microsoft"))
doc.Init("Microsoft");

doc.AddDoc(true);
embedded = FindWindow("Opusapp", NULL);
LONG IStyle = GetWindowLong(embedded, GWL_STYLE);
IStyle &= ~(WS_CAPTION | WS_THICKFRAME | WS_MINIMIZE | WS_MAXIMIZE |
WS_SYSMENU | WS_BORDER | WS_DLGFRADE | WS_SIZEBOX);
SetWindowLong(embedded, GWL_STYLE, IStyle);
LONG IExStyle = GetWindowLong(embedded, GWL_EXSTYLE);
IExStyle &= ~(WS_EX_DLGMODALFRAME | WS_EX_CLIENTEDGE | WS_EX_STATICEDGE);
SetWindowLong(embedded, GWL_EXSTYLE, IExStyle);
SetWindowPos(embedded, NULL, 0,0,0,0, SWP_FRAMECHANGED | SWP_NOMOVE |
SWP_NOSIZE | SWP_NOZORDER | SWP_NOOWNERZORDER);
::SetParent(embedded, GetHWND());
```

```
Layout();
}
private:
OfficeDoc doc;
HWND embedded;

virtual void Layout() {
if (embedded == 0)
return;
Rect r = GetScreenView();
Rect pr = GetScreenClient(embedded);
MoveWindow(embedded, r.left - pr.left, r.top - pr.top, r.Width(), r.Height(), TRUE);
}
virtual LRESULT WindowProc(UINT message, WPARAM wParam, LPARAM lParam) {
if (message == WM_SIZE)
Layout();
return TopWindow::WindowProc(message, wParam, lParam);
}
};

GUI_APP_MAIN
{
WordFrm w;
w.Open();
w.Embed();
w.Run();
}
```
