What is more, if we exchange the order of testing Excel

```
        if (sheet.IsAvailable("Open")) {  
            sheet.Init("Open");  
            sheet.AddSheet(true);  
        } else if (sheet.IsAvailable("Microsoft")) {  
            sheet.Init("Microsoft");  
            sheet.AddSheet(true);  
        }  
    }
```

opened MS Excel instead Open Calc
