This is simple edit node example (based on <a href="
http://www.ultimatepp.org/forum/index.php?t=msg&th=6380& amp;start=0&"
target="_blank">) with SetFocus problem when first "Add" button click:

```
class EditableTree : public TreeCtrl {
public:
 EditableTree() : selId_(-1) {
  editNode.SetCtrl(edit);
  OpenDeep(0, true);
 }

 void AddNode() {
  CloseEdit();

  int selId_ = Add(0);

     edit.SetData("Node" + AsString(selId_));
     edit.Show();
           edit.AutoSize();
  edit.SetFocus();//at first not select because IsOpen is false => why?

  SetNode(selId_, editNode);
 }

 void CloseEdit() {
  if (selId_ > 0) {
   SetNode(selId_, Node(~edit));
   edit.Hide();
  }
 }

private:
 int selId_;
    EditString edit;
    TreeCtrl::Node editNode;
};

GUI_APP_MAIN
{
 TopWindow wnd;
 Button btn;
 wnd.Add(btn.SetLabel("Add").LeftPos(10).TopPos(10));

 EditableTree tree;
 wnd.Add(tree.VSizePos(40).HSizePos());
```

```
 btn <<= callback(&tree, &EditableTree::AddNode);
	wnd.Run();
}
```
