Didier wrote on Thu, 10 October 2013 17:16OK I found what is wrong,

the flag CUSTOM_FONTSYS is present in the main.conf.h

BUT .....

If I remove it, it just comes back again.
TheIDE just adds it automatically again and again

This flag was being added by the plugin/FT_fontsys package (I had added it to my project last WE just to try and completelly forgot about it !!!)

==> the conclusion is : plugin/FT_fontsys does not work on linux

That is sort of weird, as I am compiling it several times a day, working on SDL/OpenGL backend... but will check it.
