Hello,

Thanks for this software, simplifies life a lot

For my need of a preview of the report I modified the source and added this:

```
String RepGen::GetResult() {
```

```
    String res;
```

```
    RepGenReportStart();
```

```
    RepGenReportVar();
```

```
    if (RepGenCalculateBody) {
```

```
        PerformLoopTable("##BT", "##ET", tpl);
```

```
        PerformLoopPlain("##BP", "##EP", tpl);
```

```
    }
```

```
    RepGenReportFinish.Execute();
```

```
    res = tpl;
```

```
    return res;
```

```
}
```

with borrowed code from `::Perform()`

This returns the QTF of the report which I feed to a RichTextView

Maybe you can add it to the source

regards

edit: it can probably work without variable "res"
